

Job Opportunities in Ecological Engineering – Read On!

Who are **cbec, inc.**?

cbec specializes in Eco-Engineering for the water resources industry. Eco-engineering is a broad title for technical services as they relate to the water resources industry to provide ecologically sensitive and sustainable solutions in the fields of hydraulics, hydrology, geomorphology and rehabilitation design. **cbec** is based, and was founded, in Sacramento, California, with branch offices in the UK. **cbec** is focused on environmentally sustainable and innovative solutions for the water resources industry, where we dedicate our efforts to developing multi-objective solutions for our clients.

Employment Opportunities

Due to rapidly expanding opportunities in the US and UK, **cbec** is searching for an energetic, dynamic, enthusiastic partner to join the firm with a goal to provide innovation and excellence in the water resources industry in the US, and overseas (particularly the UK). We are interested to hear from entry-level applicants to applicants with several years experience.

Preferable qualifications and qualities include:

- M.S. or higher degree, in Civil Engineering or other water resources related fields.
- Excellent computational, analytical and writing skills.
- Highly motivated, responsible and self-directed.
- Desire to partner with an ambitious and exciting, emerging international firm.
- Prior experience in hydraulics, hydrology, geomorphology and restoration design and registered California P.E. is advantageous.

Interested applicants should reply to either:
